Expert Training for Venomous Snake Removal

Harley has invested heavily in formal training to ensure every callout is handled safely, professionally, and in line with best practice. In 2015 he completed a two-day venomous snake relocation and handling course with theory, practical and scenario-based assessments, covering first aid, snake anatomy, snake identification, PPE, occupational health and safety, and safe capture and release procedures. This training supports the calm, methodical approach he brings to every snake job.

That training matters because Harley deals with venomous snakes on a regular basis, where sound judgement and experience are critical. From identifying dangerous species to choosing the safest relocation method, he applies proven skills developed through significant hands-on training and years of real-world experience. When you contact Snakes in the City, you are dealing with an expert who takes safety seriously and is committed to protecting people, pets and wildlife.

Snakes in the City • Professional Snake Catcher • Trusted Expertise
